1 Basic Text Formatting

Why don't I strap on my JOB HELMET and squeeze down into a **job cannon** and fire off into *Jobland* where *jobs* grow on little jobbies.

The **tipa** package can /hɛlp wiθ fonɛtɪks/.

I'm cracking eggs of wisdom!

Look at the door, dude. You see that door right there? ~~The one marked pirate?~~[1] (This requires the package `ulem`).

There are a couple of useful text diacritics: é à ö ñ î ṭ ō.

Superscript and subscript require math mode (to be discussed later)

2 Sizes

Font sizes are changed by setting the font size with a command; you must then set it back with another text font command.

They took you nightman and you don't belong to them.

Wait wait wait! What are you gonna do? Punch him in the face? Throw him? Maybe work the body a little?

I'm in love with a man... a man named God.

This is the normal size for the document (10-12pt, as defined in the call to `documentclass`).

Also, I am familiar with carpentry and I don't know who my father is. So, am I the messiah?

That's called flip-flopping, Mac! That's what Democrats do.

I become the spirit of the Nightman.

But I'm really Dayman.

This is as big as it gets.

---

[1]You think a pirate lives in there?
